

UI developer technical assessment 1

Please follow the mockup file (MOCKUP.png) in the folder to create a simple application that allows user to add, remove, and search devices. You must use Ember (<http://emberjs.com/>) to complete this assessment. The completed application should be easy to execute (without ember cli since not all developers have ember cli installed). Feel free to use any CSS frameworks such as Bootstrap. Prefer use ember components but not mandatory.

Active Devices

The list of devices actively communicating with the Monitoring Center.
